

Discovering Home Base

Let's start where you are, but where you are?

How well do you know your 'Bioregion'?

You are located in a geographical area described in terms of its unique combination of flora, fauna, geology, climate and water, an area defined by natural boundaries and distinct living communities. Wholly taken together, these distinguish your bioregion from others.

The central message is to attend to where you live by focusing on the wisdom your place. The local mix of plants, animals and watersheds, landscapes define the character and eventually the success of habitat adventure.

Describe the distinctive characteristics of your region

watersheds

geography:
natural boundaries

climate

Discovering Home Base

Make a commitment to seek out the other inhabitants of your bioregion.

fauna

flora

Migration, Seasonal
sun, birds, bees, bugs,
animals, winds, precipitation

Discovering Home Base

I live in the _____ that drains into _____,
watershed river, lake, gulf, sea

surrounded by _____, formed by _____,
prairie, mtns, coast, wetlands, landforms glacial, uplifting, erosion, volcano

topped with _____, influenced by _____,
soil type weather, climate, altitude

and populated by _____.
flora and fauna

Within a bioregion lies a patchwork of land or aquatic uses. Each patch provides habitats in which different species survive and flourish,

Discovering Home Base

Fill in the blanks using one thing from your bioregion.

Once upon a time there was _____

Every day _____

One day _____

Because of that _____

Because of that _____

Until finally _____
